# Mathematics for Humanity

Devoted to education, research, and scholarly exchange with the potential for direct relevance to the betterment of humanity

Mathematics for Humanity is a new initiative from the International Centre for Mathematical Sciences in Ediinburgh

Activities centered around three themes

Integrating the global research community:

Levelling up the world's research capacity in the mathematical sciences

Mathematical challenges for humanity:

Mathematical tools to address immediate crises, from climate change to politics

Global history of mathematics:
Disseminating a sense of global ownership of the mathematical heritage by way of an accurate retelling of history

Four streams for activity:

Research-in-Groups; Research Course or Seminar Series; Research Workshops; Research Schools

Call for proposals closes 1 June 2024

Please visit https://www.icms.org.uk/funding-opportunities/mathematics-humanity to find out more

Projects already funded include:
Rewilding Mathematics; Exploring Scaling of Mass Extinction Events for Climate Tipping-Point Modelling; Mathematics of Voting and Representation; Supporting the Development of Mathematical Resilience Globally Current Research on the History of Mathematics in the Ancient World; Algebra and Geometry from Africa; Maths for Justice
