

Rewilding: stakeholder perceptions and trade-offs

Altea Lorenzo-Arribas and Dominic Duckett

There are trade-offs in practice with rewilding particularly around food and nutrition security but also around other societal dimensions as globally represented by the UN Sustainable Development Goals (SDGs). We need solutions that are synergistic.

Building on previous collaborations, we propose transdisciplinary, methodological approaches with a focus on qualitative and quantitative scenario planning to develop both aspirational and plausible solutions based on science and society.
